

Ontario FIT Program Jumpstarts Exponential Growth of SunEdison in Canada

*SunEdison Expected to More Than Double Canadian Staff in 2010
as it Expands Partnerships with Regional Solar Developers*

Toronto, Ontario – December 4, 2009 – SunEdison, North America's leading solar services provider, has announced that it will be more than doubling its Canadian workforce in 2010. The feed-in-tariff (FIT) program in Ontario is a key fuel to growth. SunEdison has a strong foothold in Canada as an owner/operator of Canada's first solar PV energy park, First Light, a 9.1MW project located in Stone Mills, Ontario. SunEdison will be hiring for the following positions in Canada during the first quarter of 2010:

- Regional Operations Managers
- Project Managers
- Project Superintendents
- Assistant Project Superintendents
- Electrical Engineers
- Project Engineers
- Project Coordinators
- Safety Coordinators
- Logistics/Buyers
- Cost Accountants
- CAD Drafters
- Sales Managers

In addition, SunEdison continues its active discussions with Canadian developers to expand strategic partnership agreements on projects.

According to Jason Gray, director of Canadian operations for SunEdison, "We are excited to be ramping up to meet the opportunities the FIT program in Ontario offers and to continue work on our established RESOP projects. As a solar company committed to the Ontario market, we will establish local supply agreements and the necessary operations and maintenance teams to build out our pipeline. Moreover, we will commit financial resources to local developers through project partnerships".

Ontario's feed-in tariff or FIT Program is North America's first comprehensive guaranteed pricing structure for renewable electricity production. It offers stable prices under long-term contracts for energy generated from renewable sources, including PV solar.

The FIT Program was enabled by the *Green Energy and Green Economy Act, 2009* which was passed into law on May 14, 2009. The Ontario Power Authority is responsible for implementing the program.

About SunEdison

SunEdison is North America's largest solar energy services provider. The company finances, installs and operates distributed power plants using proven photovoltaic technologies, delivering fully managed solar energy services for its commercial, government and utility customers. In 2008, SunEdison delivered more

kilowatt hours (kWh) of energy than any other solar services provider in North America. SunEdison is a fully owned subsidiary of MEMC, an S&P 500 company and a leading manufacturer of silicon wafers for the solar and semiconductor industries.
